

Citizens for Alternate Routing of Electricity

PETITION

For Revised Proposed Alternate Route C

Alternate Routing of Transmission Towers and Overhead Power Lines

(SCE's Tehachapi Renewable Transmission Project)

Attn: California Public Utilities Commission, Aspen Environmental, SCE, Governor's Office, Media

Southern California Edison Company (SCE) is proposing to replace old deactivated 220kV power lines with new 500kV energized lines through the heart of our city. The center for many of these transmission towers and overhead power lines will be in residential backyards.

We, the undersigned residents hereby request the California Public Utilities Commission and SCE to accept the City of Chino Hills "*Revised Proposed Alternate Route C*". Route C is an alternate route away from residential neighborhoods and gives right-of-way land back to Chino Hills State Park. Although, we would accept any of the alternate routes the City of Chino Hills has proposed (except Alternate Route D).
